FQE® Fin-Fan Degreaser is a liquid cleaning formulation containing a blend of non-ionic and anionic wetting, penetrating, and emulsifying agents.

These, coupled with a special blend of inorganic “builders” for water softening and detergency, give a product with all-around superior performance and economy for removal of industrial soils in the light to medium-heavy range. FQE Fin-Fan Degreaser contains no inorganic phosphate builders.

Application
FQE Fin-Fan Degreaser is specifically designed for application to industrial Fin-Fan Coolers and other metal surfaces. It can be used to safely remove a variety of soils including oils, carbon black, and solvents. FQE Fin-Fan Degreaser is safe for application to soft metal surfaces such as aluminum and brass. It is especially effective in steam cleaning systems in refinery and petrochemical plants, as well as in other heavy industries.

Dilution
The product is diluted at 1:10 when used in a steam jet system. FQE Fin-Fan Degreaser may be diluted up to 1 part to 5-20 parts water for light cleaning. In Fin-Fan cooler cleaning applications, FQE Fin-Fan Degreaser is applied at 3-5% in water for cleaning. A foam on application is recommended for cleaning industrial cooler systems with the product allowed to stay on the metal surfaces for 15-20 minutes before rinsing with water. FQE Fin-Fan Degreaser rinses easily with industrial water sources.
